### **Oleg Roschin says**

Three excellent plays by an underrated author who is, in my opinion, one of the top playwrights of the 20th century (and that's saying a lot). All three plays have an element of science fiction (namely, time manipulation) in them, but are otherwise completely realistic and deal with love, truth, human condition, and other important topics, against the backdrop of ordinary British mid-century middle-class life. My favorite of the three is the first one, "Dangerous Corners", where the time-shifting element is rather cosmetic, but it is written with such sweeping force that I can't help re-reading it in its entirety whenever I cast a glance on the cover. It's incredibly tense and masterfully composed, without a single dull moment.

Priestley's Time Plays play with the concept of time. Each of the three plays has a different kind of twist, which is interesting and thought provoking. Recommended for college and high school drama groups!

I read Dangerous Corner and Time and the Conways two or three years ago, i don't remember anything about both except that they were ok because i completed reading both which indicate - at least - that they weren't bad.

My review about I Have Been Here Before is here
