**Christal Hillner says**

Science

---

**Tracey says**

Great book to use in a space unit

---

**Jamie says**

Ms. Frizzle takes her class on an exciting adventure to outer space. While in outer space they explore meteors, comets, and the moon. Ms Frizzle takes her student on an adventure that is out of this world. This magic school bus adventure lets its readers imagination explore how it could be like on the moon or what meteors might look like before they hit earth's surface. These books are great for readers to get out there and think out of the box.

---

**Lily McGlone says**

Lily really enjoyed this, and seems to like the 'story' format better than the ones that just shove information down her throat without any story.

---

**Andd Becker says**

The book is based on an episode from the animated television series. The subject is meteorites, comets, and asteroids.

---

**Audrey says**

This book in the Magic School Bus series (like all of them) is engaging and challenging for independent reading or great as a read-aloud for teaching.

---

**Dolly says**

Fun Magic School Bus book about all kinds of space rocks: meteors, comets, asteroids, meteorites, etc. It's a typical story in the series and offers a lot of information in an entertaining format. I like these books, because I often learn some new bit of information and the stories are fun to read aloud. Our girls just love them and will pick them first when choosing a book at bedtime.

---

### **Karina Espinales says**

This is a good 4th grade book because it talk about space. The focus is more about their adventure and learning about gravity. It has great illustrations and details about gravity and how it works. It is non-fiction.

---

### **Amber Pound says**

The class takes a field trip into space to stop an asteroid that is coming towards their school.

---

### **BritneyAnne McDonald says**

Dorothy Ann believes there is an asteroid heading straight toward the school! Ms. Frizzle announces its time for another field trip adventure! Their magic school bus takes them into Outer Space, through the solar system because NASA is busy! They embark on a journey filled with learning and observing what the planets, asteroids, the moon and its gravitational pull are truly like. Things get intense as they are sent off course. Will they save the school while making it home in one piece?

This brought back sweet childhood memories. I love how its imaginable yet educational.

I would use this in a science class about the planets in our solar system and what outer space is all about.
