## War of The Worlds T.I. Wade

Ryan Richmond has dreamed about going to space since the age of seven. Reading space updates—and seeing pictures of Neil Armstrong on the lunar surface in National Geographic—was the ignition of this dream.

Ryan Richmond would like me to tell you that the corridors of space are now officially open for all future space pioneers like you!

YOU MAY NOW GO TO SPACE!

(The final novel in the America One series),

ENJOY! and thank you for being part of the story, the most important part- The Reader.

**America one (7) war of the worlds.**

I liked book 7 , but in some ways it was disappointing ; the characters from the beginning books were growing old and dying off, and their children and replacements don't have any emotional ties as they did. My biggest hope in the storylines was that perhaps Astermine scientists would develop superficial travel and open the starways. But that is a difficult thing to write when you stick primarily to hard science. I did enjoy that in all the books , that real practical science was adhered to , showing that it can be done. Which is the most important story of all in this series.

AMERICA ONE was an epic series I will always remember as one of my favorites in all of sci-fi. Maybe America2 could be the interstellar journeys?? (Hint,hint)

**Didn't want it to end**

Wade is a genius. This book is GREAT, no way about it. Again it could be a couple of books. The ending even got me a tear to my eyes. I still don't what happened to Mars and Saturn? Again a GREAT book.
