**Ups And Downs: A Book About Floating And Sinking** Joanna Cole , Nancy Stevenson (Illustrator)

Is there a monster living in Walker Lake? That's what Ms.Fizzle's class is trying to find out. The kids try to dive down under the water, but the bus won't go! The class has to figure out how to turn their floater into a sinker so they can solve the mystery of the underwater monster. Take a dive with the Magic School Bus, and learn why things float and sink!

## Ups And Downs: A Book About Floating And Sinking Details

Date : Published February 1st 1997 by Scholastic Paperbacks (first published January 1st 1997)

ISBN : 9780590921589

Author : Joanna Cole , Nancy Stevenson (Illustrator)

Format : Paperback 32 pages

Genre : Science, Childrens, Picture Books

# From Reader Review Ups And Downs: A Book About Floating And Sinking for online ebook

## Mary Dolce says

A regular pick off our shelf by my 6 and 4 year old for me to read to them and educational too ! I get into doing the voices of the characters and its one of those books that I don't mind reading a number of times (I guess if I did, It would be hidden somewhere..)

---

## Audrey says

This book doesn't have as much teaching potential as some of the other books in the series, but it's still a great read with a solid theme.

---

## Dolly says

This was a good book in the Magic School Bus series, but I think it was better as a television episode. It was easier to visualize the concepts and how it worked. But in any case, our girls love these books and we read every one that we can get our hands on. It's always the first book they want to read.

---

## Eva Leger says

Julia loves the Magic School Bus shows and books. As soon as she stumbles upon a new one at the library I know what we'll be reading - over and over - for a few days. This was only read once and the reason for that is because Julia found another Magic School Bus book about dinosaurs at the same time. Since dinosaurs are just about her favorite thing in the whole wide world (besides her mommy of course...) The Magic School Bus: In the Time of the Dinosaurs was the one we read over and over and over. And over.

In this story the kids and Ms. Frizzle go on a dive to figure out the mystery of a sea monster. The kids do find the answer in the end of course and along the way have some fun.

I think my favorite part of the stories is the humor - even an adult will laugh out loud at certain parts, usually in the dialog between students.

Another reviewer mentioned her child getting confused at some parts, between what is real and what isn't.

My daughter is five years old so we didn't have that experience but I can definitely see it happening with a young child. I think that since this is portrayed as a classroom, as a teaching experience, a young child may take it all as truth which it's definitely not.

I think it was worth mentioning and something parents should be aware of. I'd guess that maybe children 4+ would be fine with it all for the most part.

---

## Bethany says

I would love to read this book to students and then do a hands-on activity so they could see what does float and sink. They also could use a log sheet to make predictions of what will float or sink based on their prior knowledge.

Topic: floating and sinking

Grades: 1-5

---

### **Amy Olson says**

The Magic School Bus book series are great double duty books that work in literacy and in science! The Magic School Bus Ups and Downs explores the scientific theory of sinking and floating in kid friendly writing. Common reading strategies like predicting, doing a picture walk, inferring etc. can all be incorporated in this book.

---

### **ABC says**

There is a monster at the bottom of the pond...or is there? Ms. Frisby and the kids find out for sure. The science was a little confusing.

---

### **Theresa says**

Ups And Downs: A Book About Floating And Sinking

Cole, Joanna

this is a book about science and exploration. looking at float or sinking

---

### **Little Miss and the Legomeister says**

I love the Magic School Bus books. I've read quite a few over the years. Legomeister loved them a couple of years ago. He still checks them out sometimes, but he doesn't ask me to read them to him anymore. Now it's Little Miss who requests them.

The Magic School Bus Characters learn the principles of buoyancy and uncover a fraud.

---

### **Diana Thomsen says**

I used this to go along with our unit on density and buoyancy. It was a hit. To be fair, I really think the book is only good if you've watched the show, but with so little out there that would function as a read-aloud for younger kids on the subject, I'm certainly not going to complain.

---

## **VillaPark Public Library says**

The students are trying to find a monster in the lake that they heard about from their favorite TV show. When they arrive at the lake, they want to see what's under the water, but they have a problem: the materials they brought to help them are floating. How can they make them sink to get to the monster? Their teacher, Ms. Frizzle, arrives to help them out. They figure out that adding weight to items makes them sink, and when that weight is taken away, they float again. The kids also find out that crumpling an object to make it small forces it to sink, and when the object is flattened out again it floats. They discover a lot about floating and sinking, but will they find the monster?

## **Emily Clare says**

I like Magic School Bus books because they make a story out of learning about science. Would be perfect for older elementary students, could possibly use it as a mentor text.

## **EDUC535 says**

Danielle M

The Magic School Bus Ups and Downs: A Book About Floating and Sinking

Have you ever wanted to go on a field trip with Ms. Frizzle? Now is your chance! Take a "dive" into learning about sinking and floating with the Frizz.

This book is a great way to teach opposites to students with real life connections.

---

## **Adrienne says**

My son liked the story but got confused between what was real and what wasn't. He understood the explanations about floating and sinking but then thought that the bus could actually crumple. He had a hard time deciding what was true and what was not.
