Anyone planning on a career in the therapeutic sciences requires a unique foundation in the basic sciences of the human body. This new book offers detailed content on the muscles, skeleton, and nervous system, but also provides the necessary information on other systems. Specially written applications with a focus on massage and physical therapy are included. An outstanding illustration program is also integrated to highlight important concepts and special diagrams are presented that point to origin, insertion, and innervation of muscles. This is crucial knowledge for massage therapists, physical therapists, and occupational therapists
